PROFESSIONAL SUMMARY

Full-stack software engineer with 3.5+ years of experience building and scaling production web and mobile applications. Skilled in React.js, React Native and Laravel, with strong expertise in real-time features, performance optimization, debugging and client-facing problem solving. Own a mobile app used across two countries, deliver features end-to-end, build secure systems as a freelancer, and use AI-assisted engineering with Claude Code every day to ship faster while keeping code quality high.

WORK EXPERIENCE

Software Engineer | Wakilni (Logistics Company) **March 2023 – Present**

- Designed, developed and maintained features across Wakilni's portal (Laravel, React.js) and mobile app (React Native), owning projects end-to-end from backend APIs to frontend UI.
- Own the Wakilni mobile app for Lebanon and Jordan: develop features for both markets, prepare and ship releases for each country, and supported the company's launch in Jordan.
- Led end-to-end development of the WhatsApp Communication Tool, now used by all 200 drivers to chat with customers from inside each delivery task and handling 10,000+ messages a day through the WhatsApp Business API, with real-time updates over Pusher, message templates, bulk conversation starts, voice notes, media, delivery status tracking and automatic retry of failed messages.
- Built a full chat experience on top of it, including history pagination, drafts, pinned chats, labels and Arabic localization with right-to-left support.
- Rolled the Communication Tool out gradually with feature flags in driver batches, and ran weekly live demos with drivers to gather feedback and drive adoption.
- Improved app stability and performance at scale by running load and stress tests, profiling rendering and network behavior, and shipping targeted fixes such as memoization, request batching, caching and adaptive polling.
- Built push notification delivery with Firebase Cloud Messaging for the driver and customer apps, including grouped notifications, device token lifecycle management and root-cause analysis of delivery issues.
- Built and optimized the Master Barcode Verification flow, enhanced return and bulk order processes, and implemented Redis caching with Bloom filters to eliminate duplicate scans and improve efficiency.
- Delivered the full international orders lifecycle (create, edit, view, logs, attach barcodes) on the frontend with backend developers, consolidating duplicate logic into reusable modular components.
- Implemented major Ops App features including move orders, advanced search, express alerts, feature flags and multi-role workflows (admin, ops, driver, staff), streamlining operations across departments.
- Built and deployed the Self Pickup Network with BOB Finance, enabling branch-level staff onboarding with tailored restrictions and permissions, and extended Shopify and WooCommerce order flows for diverse client needs.
- Increased platform performance by optimizing queries and high-traffic APIs such as order confirmation and barcode scanning, adding Redis caching, and refactoring legacy components into reusable modules.
- Owned production support in weekly rotations and worked directly with clients to troubleshoot integration issues, resolve critical bugs and deliver requested adjustments.
- Strengthened team practices through peer code reviews, mentoring teammates and documenting key workflows, and improved security by creating restricted-access views for collaborators.

ESA Coding Lab | Coding Bootcamp **April 2022 – Sep 2022**

- Completed 6-month, 700+ hour training in full-stack web development (React, Node.js, Express.js, MongoDB).
- Built responsive web applications and collaborated in Agile teams on production-style projects.

FREELANCE & SIDE PROJECTS

TelGlob | Secure eSIM Profile Portal **October 2026**

Freelance Full-Stack Developer, Remote | Live at secure.telglob.com

- Designed, built and deployed a secure portal for a telecom client where mobile network operators hand over

eSIM profile data (Ki/OPc keys), replacing transfers over email and WhatsApp.

- Built with Laravel 13 and Inertia React, with end-to-end encryption in the browser: partners encrypt each batch with RSA-4096 and AES-GCM before upload, and only the admin can decrypt it with a passphrase-protected private key that never leaves their machine.
- Added invite-only accounts with mandatory two-factor authentication, partner and MNO management, a tamper-resistant audit log, email alerts for new uploads, CSV export for SM-DP+ provisioning and automatic deletion of data after 24–48 hours.
- Set up a hardened Ubuntu 24.04 server: nginx, PHP-FPM, Supervisor queue workers, cron scheduler, Let's Encrypt TLS, UFW and fail2ban, key-only SSH, daily backups and a one-command deploy script.
- Gathered requirements directly with the client, ran user acceptance testing and handed the system over in production.

Madison | Freelance WordPress Developer **January 2025 – January 2026**

- Developed multiple WordPress websites, mostly e-commerce, from design hand-off to launch.
- Worked closely with clients and a UI/UX designer to turn designs into responsive, pixel-perfect sites.
- Coded custom features and functionality beyond theme and plugin defaults to meet specific client requirements.
- Set up Meta Pixel and conversion tracking to support clients' Meta ad campaigns.

AI-ASSISTED ENGINEERING WITH CLAUDE

- Use Claude Code every day in the terminal and VS Code to plan features, write and refactor code, and review changes before pull requests.
- Maintain persistent Claude project memory across the mobile and backend repositories, so the agent follows team conventions and keeps context from past investigations between sessions.
- Use Claude Code for load and stress testing, root-cause analysis and production troubleshooting.

TECHNICAL SKILLS

Frontend: React.js, React Native, Inertia.js, JavaScript, HTML, CSS, Bootstrap

Backend: Laravel (PHP), WordPress | **Databases:** MySQL, MongoDB, Redis

Integrations: WhatsApp Business API, Pusher (WebSockets), Firebase Cloud Messaging, Shopify, WooCommerce, Meta Pixel

DevOps: Linux (Ubuntu), nginx, Supervisor, Let's Encrypt, Sentry

Tools: Git, Jira, Postman, Claude Code | **UI/UX:** Figma

EDUCATION

B.S. in Computer Science | Lebanese International University | Graduated 2021 | GPA: 3.71/4
